

ARUN BONDALAPATI

CRM Technical Lead | AI Automation, Integration & CRM/GTM Systems | Salesforce + HubSpot

Bristol, United Kingdom · +44 7448 141510 · arun.bondalapati@gmail.com

PROFILE

I run LLM agents in production and build what they run on. Nine years on the Salesforce platform, the last five leading CRM engineering at GDS Group: keeping Salesforce and HubSpot agreeing, around seven scheduled agents working the live systems, and the AI automation and internal software on top, built with Claude Code and MCP. As a single engineer I have shipped 60+ internal tools into production, each owned end to end from build and deployment to access control and support. 4x Salesforce Certified with an MSc in Advanced Computer Science. Seeking AI automation, integration, RevOps or solutions engineering roles.

CORE SKILLS

Salesforce	Apex, Lightning Web Components, Flow, SOQL, Sales Cloud, Service Cloud, REST / Bulk 2.0 / SOAP APIs, Tooling API, Agentforce, org administration and release management
HubSpot	Private apps, UI extensions (React / TypeScript record cards), webhooks, workflows, imports and deduplication, data quality
AI & automation	Claude Code, MCP (Model Context Protocol), scheduled LLM agents with tool connectors, browser automation for API-less admin screens, Zapier, Agentforce design
Engineering	Node.js, TypeScript, JavaScript, React, Vercel serverless, GitHub, Entra ID (OIDC, PKCE), Microsoft Graph, SQL, signed JWT sessions
Integration & data	Idempotent webhooks, rate-limit backoff, read-back verification, data migration and reconciliation, duplicate detection, data governance, runbooks

EXPERIENCE

CRM Technical Lead | GDS Group

Bristol · Aug 2021 – Present

Lead CRM engineering for a global B2B events business: Salesforce and HubSpot, the integration layer between them, and the AI automation and internal software on top.

- **AI agents in production:** around seven scheduled LLM agents with tool connectors into Salesforce, monday.com and Microsoft Teams. Each reads current state, applies business rules and takes one visible action: a chat, a digest, a board update. One assembles the next event day's crew chat each morning from live board state.
- **Agentic delivery:** build with Claude Code, MCP connectors into both CRMs and browser automation for API-less admin screens. Shipped 60+ internal web apps and dashboards into production, 37 catalogued behind one SSO-gated directory used daily across the business, plus 10+ in-CRM React / TypeScript cards. One dashboard replaced a 24,000-row weekly workbook, validated against 253 of 253 of its values.
- **Agentforce:** designed and specified a pipeline-triage agent (Apex invocable actions, topics, test utterances), not yet deployed. Built an LLM commentary panel in a dashboard, then replaced it with deterministic cards after review.
- **Integration layer:** 20+ Salesforce–HubSpot syncs from every minute to nightly and 11 production integrations on one connected app. Dry-run defaults, idempotency keys, rate-limit backoff and read-back verification throughout.
- **Deal-to-order:** three sales pipelines as code, turning a deal-stage change into a Salesforce order in seconds. A check-then-act race was creating duplicate orders; an idempotent external-ID upsert ended it. Sub-second webhook acknowledgement with deferred processing.
- **Data migration:** 250,000+ records migrated and reconciled across the two CRMs: 40,547 contacts created in one zero-failure run, 21,097 opportunities migrated with no duplicates, cross-system IDs written back via Bulk API 2.0, 6,682 broken company associations repaired.
- **Data quality:** in-house duplicate detection beyond exact-email matching, with ~198,000 contacts and ~64,000 companies scored on one rule set and surfaced in-record. Caught a two-way field mirror overwriting reps' edits and rebuilt it to arbitrate on property history, so the last human edit wins.
- **Platform:** the shared auth layer every app uses (Entra ID OIDC / PKCE, signed JWT sessions, server-side access lists); an Apex REST service with asynchronous callouts at 87%+ test coverage in full-copy sandbox; LWC deployed via the Tooling API; SOAP merge() deduplication.
- **Org ownership:** profiles, permission sets, field-level security, sandboxes, user and licence admin, IT support queue.

Salesforce Manager Intern (Developer / Project Manager) | Northumbria University Remote · Jan 2021 – Jun 2021

- Designed the data model for GDPR-sensitive personal data within a regulated environment.
- Built Lightning components and UI on the Lightning Design System; delivered reports, dashboards and automation.
- Planned the project, coordinated the team and kept stakeholders informed through to delivery.

Salesforce Developer | Capgemini Hyderabad · Feb 2019 – Jan 2020

- Developed Apex classes, triggers and Lightning components on the Toyota Australia Community Cloud programme.
- Built the integrations, data model, automation and security configuration aligned to platform standards.

Salesforce Developer | Birlasoft Noida · Aug 2017 – Feb 2019

- First two years on the Salesforce platform: Apex, configuration and automation on enterprise CRM engagements.

SELECTED PROJECTS

- **Scheduled LLM agent operations.** Around seven agents on cron with tool connectors into Salesforce, a work-management platform and Teams. Business rules applied to live board and CRM state; output as chats, digests and board updates. Result: work done by hand each morning now runs on schedule, with every action visible to the team.
- **Deal-to-order integration.** Three Salesforce–HubSpot pipelines as code: idempotent external-ID upsert, signed webhooks, sub-second acknowledgement with deferred processing. Result: a deal-stage change becomes an order in seconds, and the duplicate-order race is gone.
- **Data-quality and duplicate-detection platform.** One rule set across ~198,000 contacts and ~64,000 companies, surfaced as a dashboard and an in-record card. Result: 1,289 duplicate groups traced upstream and fixed at the source rather than cleaned repeatedly.
- **CRM migration and reconciliation programme.** 250,000+ records across two CRMs with Bulk API 2.0 write-back of cross-system IDs. Result: zero-failure, zero-duplicate runs, and both CRMs agree on who a customer is.
- **Internal application platform and SSO gateway.** Entra ID OIDC / PKCE, signed JWT sessions, access lists re-checked server-side on every request. Result: 60+ tools in production, 37 catalogued in one directory, on one shared auth layer.
- **Delegate performance reporting engine.** Replaced a 24,000-row weekly workbook with a live dashboard. Result: validated against 253 of 253 values the workbook had already calculated before release.
- **Agentforce triage agent (design and specification).** Apex invocable actions, topics and test utterances for a Salesforce pipeline-triage agent. Not yet deployed.

LEADERSHIP & WAYS OF WORKING

- Run technical discovery workshops and solution-design sessions with business and technology stakeholders, turning requirements into practical tools and workflows.
- Define and enforce platform standards: coding conventions, governance, code review, release management and a runbook per system.
- Mentor developers and give technical direction; own the production support queue for everything I ship.
- Work in the open: dry-run defaults, read-back verification and visible agent actions, so every automated change can be checked by a person.

EDUCATION

MSc Advanced Computer Science | Northumbria University, Newcastle upon Tyne 2020 – 2022

Programme Representative for the cohort.

CERTIFICATIONS

Salesforce Certified Platform Developer I
Salesforce Certified Platform App Builder

Salesforce Certified Administrator (2019)
Salesforce Certified Associate (2023)
